# PROJECT REPORT

**Name:** Atharva Kulkarni
**Reg No.:** 25BAI10584
**Branch:** B.Tech CSE AIML year-1

**Course Code:** CSE0001
**Course Title:** Digital Literacy
**Date:** 31th March 2026

# Introduction

This project was assigned as part of the Digital Literacy course, where I was given the role of a Student Digital Ambassador. The aim was to understand and demonstrate essential digital skills that are useful for students in today's world. The project involved creating an infographic, building a digital portfolio, exploring platforms, writing professional emails, and studying cybercrime awareness.

Through these tasks, I not only learned about tools and platforms but also understood the importance of responsible online behavior. Overall, this project helped me become more confident in using digital resources effectively.

# Task 1 – Digital Literacy Infographic

For this task, I created an infographic using Canva. The design focused on explaining what digital literacy means, safe internet practices, and useful tools for students like Google Docs and GitHub. I tried to keep the layout simple and visually clear so that anyone can quickly understand the key ideas.

One interesting thing was how design plays a big role in communication. Even small choices like colors and icons can affect how the information is understood. However, I found it slightly difficult to balance content and design — sometimes I had too much text, and I had to reduce it to keep it clean.

Overall, this task helped me understand how to present information in a more engaging and visual way.

# Task 2 – Digital Portfolio

In this task, I created/updated profiles on GitHub, LinkedIn, and HackerRank. GitHub is mainly used to store and showcase coding projects, while LinkedIn helps in building a professional network. HackerRank is useful for improving coding skills through practice problems.

On GitHub, I added a profile README with my basic details and learning goals. On LinkedIn, I completed my education section. These platforms will be very helpful in the next four years, especially for internships and placements.

I plan to regularly update my GitHub with projects and stay active on LinkedIn to connect with professionals. This task made me realize how important it is to start building a professional online presence early.

# Task 3 – Platforms Exploration

For the coding part, I used HackerRank and completed a beginner-level problem. It helped me understand how coding platforms work and how problems are structured.

For collaboration, I created a Google Form with 5 questions related to digital literacy awareness. I also viewed responses through Google Sheets. This showed how useful these tools are for collecting and analyzing data easily.

These platforms will definitely help me academically. Coding sites will improve my problem-solving skills, while tools like Google Forms can be useful in projects, surveys, and group work.

# Task 4 – Email Etiquette

A common issue in digital communication is sending unclear or informal emails. For example, if a student writes an email without a proper subject or greeting, it can create confusion or even be ignored by the receiver.

In such cases, using proper structure, polite tone, and clarity can make a big difference. This task helped me understand how important professionalism is in emails.

I also created a checklist of social media dos and don’ts, which can guide students to behave responsibly online.

# Task 5 – Cybercrime Awareness

While researching cybercrime, I was surprised by how common phishing and online fraud have become. Many people fall into traps because the messages look very real and urgent.

One thing I realized is that even a small mistake, like clicking an unknown link, can cause serious problems. Because of this, I will be more careful while checking emails, messages, and links in the future.

This task made me more aware of online risks and how to avoid them.

# Conclusion

This project helped me understand the importance of digital literacy in a practical way. From creating content to maintaining online profiles and staying safe online, each task added something valuable.

Overall, I learned not just tools, but also how to use them responsibly. These skills will definitely help me in my academic and professional journey.
